

Branch-and-bound Easy Example (Accompanying Lesson 16)

1 Branch-and-bound Example

Solve the following IP using branch-and-bound. Solve each sub problem graphically.

$$\begin{aligned}
 \text{(P1)} \quad & z_{IP}^* = \max 4x_1 - x_2 \\
 \text{s.t.} \quad & 7x_1 - 2x_2 \leq 14 \\
 & 2x_1 - 2x_2 \leq 3 \\
 & x_2 \leq 3 \\
 & x_1, x_2 \in \mathbb{Z}^{\geq 0}
 \end{aligned}$$

- Solve each sub-problem graphically
- Branching Rules
 - Always select the active node with the largest upperbound for branching.
 - Branch on x_1 if it is fractional. Otherwise branch on x_2 .
- Book-keeping
 - Keep track of the:
 - ◊ incumbent solution \underline{x} ,
 - ◊ global lower bound \underline{z} , and
 - ◊ list of active nodes.
 - Draw the branch-and-bound tree:
 - ◊ Record the local upper bound (z) and relaxed optimal solution (x) for each subproblem.
 - ◊ Label each edge with the constraint that is added to form the child subproblem.
 - ◊ X-out fathomed nodes. Circle incumbent solution nodes.
 - Use the provided diagram to illustrate the (relaxed) feasible region of each subproblem.

incumbent solution \underline{x}

global lower bound \underline{z}

active nodes

B & B Tree

A: $(0, 3)$, $z = -3$

B: $(0, 0)$, $z = 0$

C: $(\frac{3}{2}, 0)$, $z = 6$

D: $(\frac{11}{5}, \frac{7}{10})$, $z = 8.1$

E: $(\frac{20}{7}, 3)$, $z = 8.4$

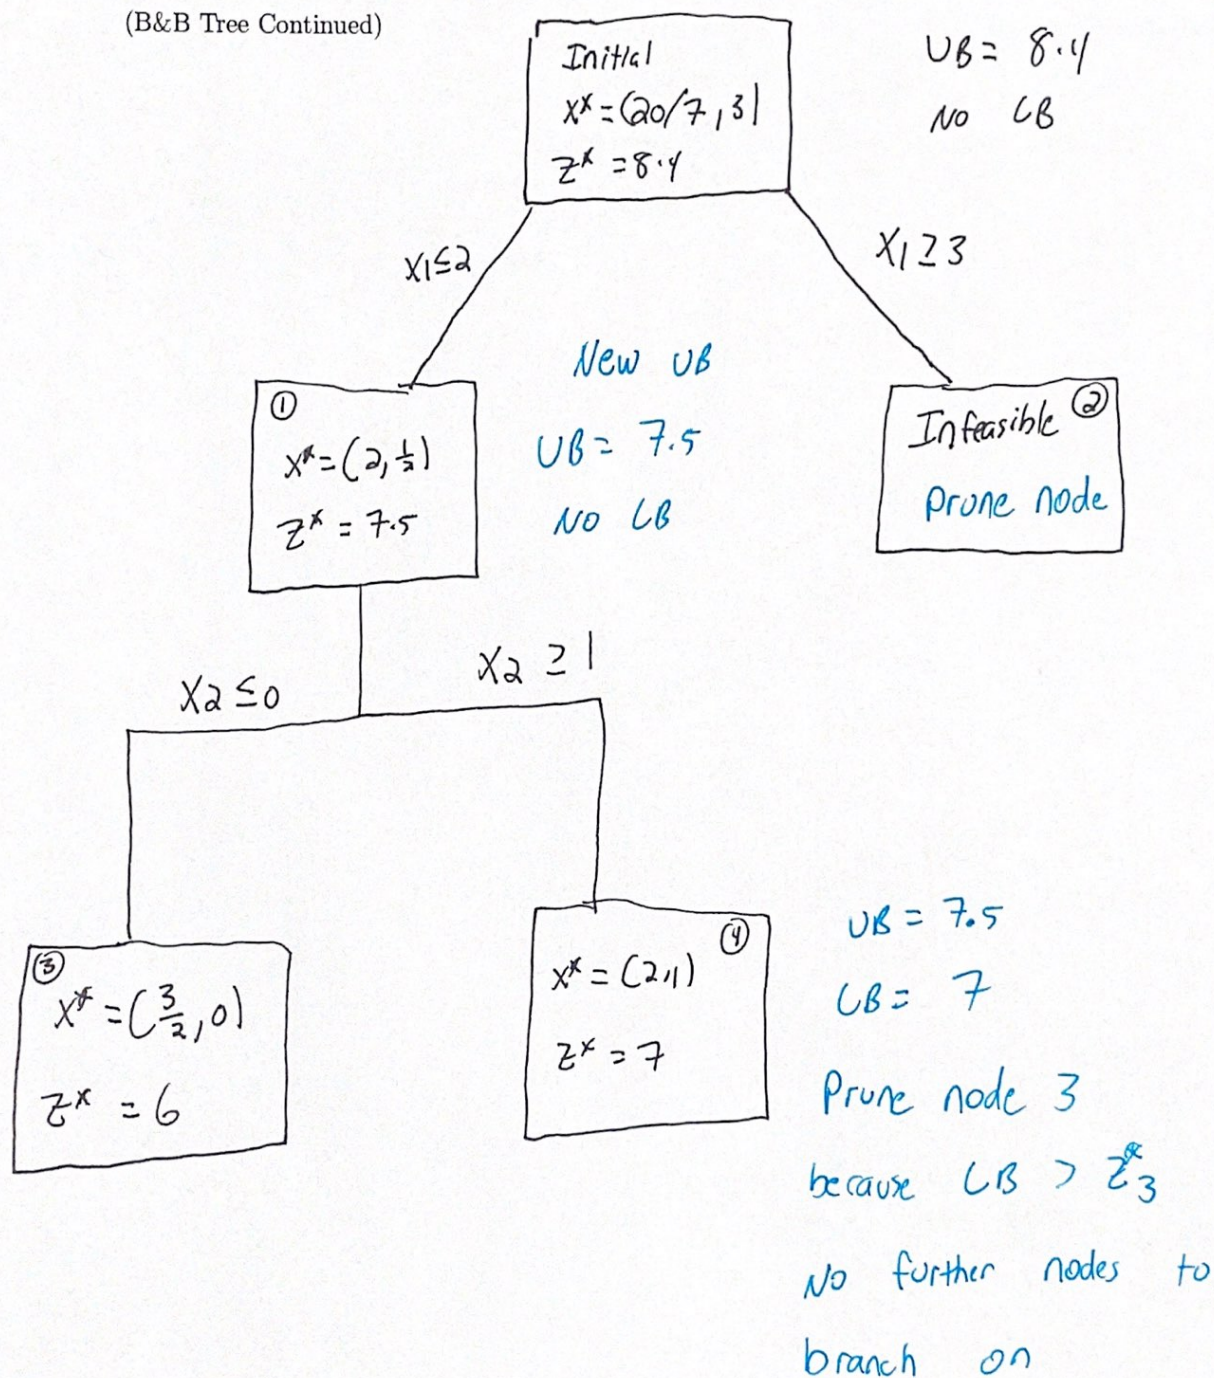

F: $(2, \frac{1}{2})$, $z = 7.5$

G: $(2, 3)$, $z = 5$

H: $(0, 1)$, $z = -1$

I: $(2, 1)$, $z = 7$

(B&B Tree Continued)

$$z_{Ip}^* = 7$$

$$x_{Ip}^* = (2, 1)$$
